REASONS FOR ALLOWANCE

The following is a statement of reasons for the indication of allowable subject matter:

The claims in this application are directed to a method of increasing a population of dividing cells in a tissue of a mammal comprising contacting the cells with at least one inhibitor of nitric oxide. The claims were deemed to be obvious over U.S. Patent 6,372,796 and a Terminal Disclaimer was filed and accepted by the U.S. Patent Office.

There was a restriction requirement made in the subject application.

The applicant's arguments are persuasive. There is adequate disclosure in the specification to enable one of ordinary skill in the art to practice applicant's claimed invention without undue experimentation. This is deemed an enabling disclosure since the characteristic of nitric oxide inhibitors is not tissue-specific. The article cited by the applicant, Packer; PNAS 100:9566-571 has been reviewed and is persuasive since the examiner has no scientific reason to establish undue experimentation is required to practice applicant's invention. Applicant in this article has shown that the claimed invention is effective in rats.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Theodore J. Criares whose telephone number is (571) 272-0625. The examiner can normally be reached on 6:30 A.M. to 5:00P.M. Monday through Thursday.
